

Suicide in Idaho

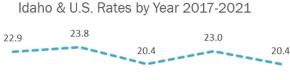

2017-2021

- The statewide suicide rate for 2021 decreased by over 14% since 2018's historical high.
- Firearms were the most common method of injury, used in 63% of Idaho suicides.
- Males were far more likely than females to die by suicide, representing 8-in-10 Idaho suicides.
- Suicide remained the 2nd leading cause of death among Idahoans aged 10-24 in 2021.
- Between 2017-2021, 132 Idaho school children (ages 10-18 years old) died by suicide; 34 of those deaths were to children age 14 or younger.
- Suicide rates were highest in less densely populated counties where mental health services are limited.
